

Swoosh

Short links and link-in-bio pages that you own

Live: swoo-sh.onrender.com

FastAPI + Neon PostgreSQL + Cloudinary

Open source under the MIT License

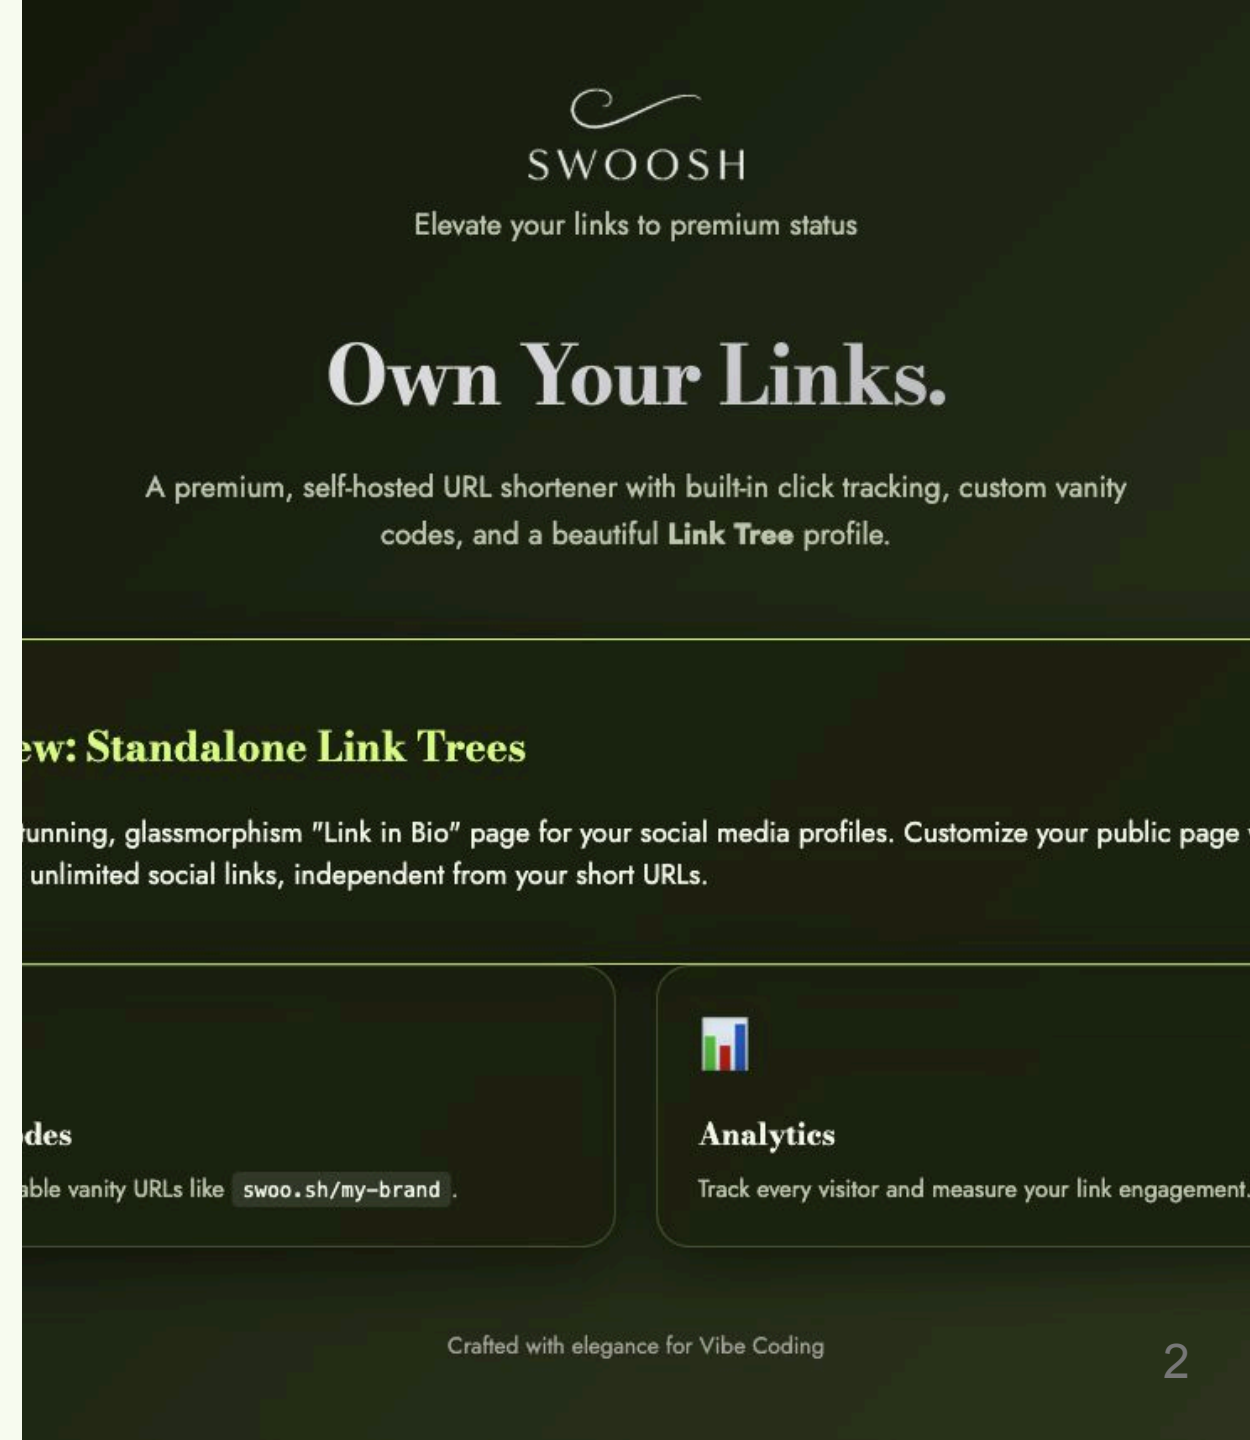

One account, two workspaces

Shortener

- Create generated or custom short URLs.
- Manage links, QR codes, and click analytics.

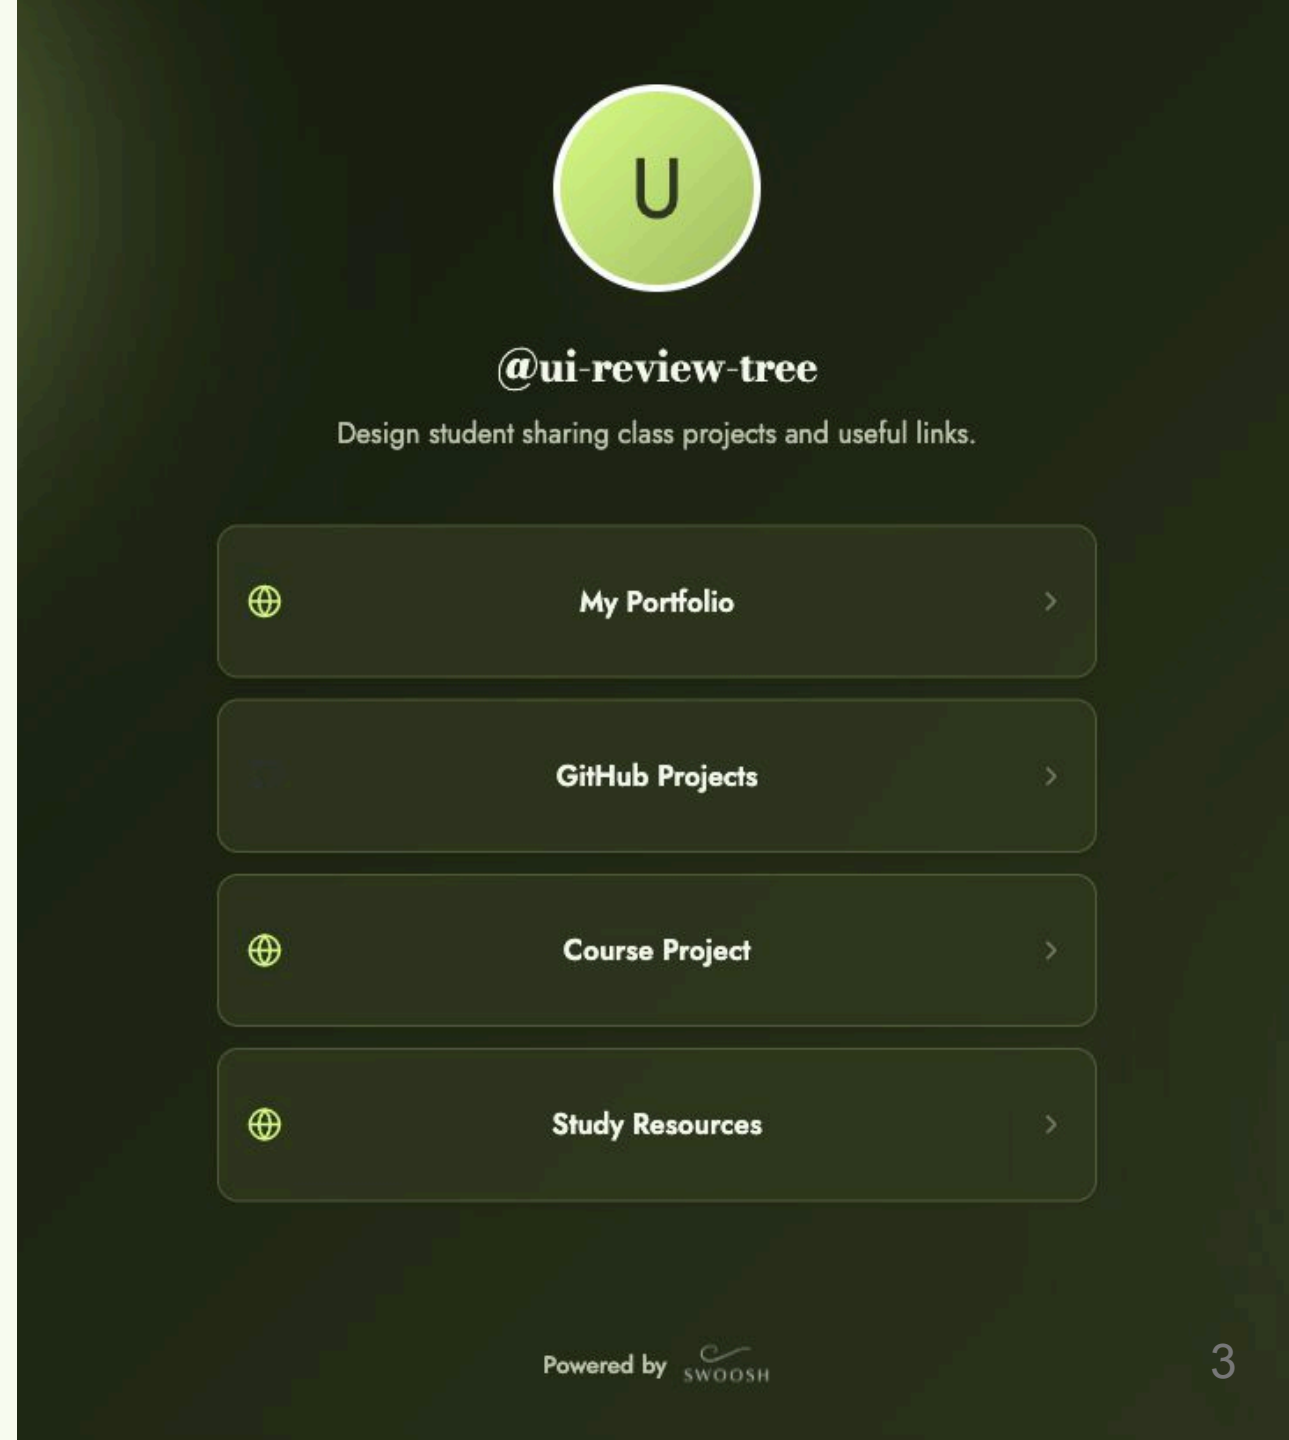

Link Tree

- Create up to five public profiles.
- Share a bio, avatar, social links, and visit count.

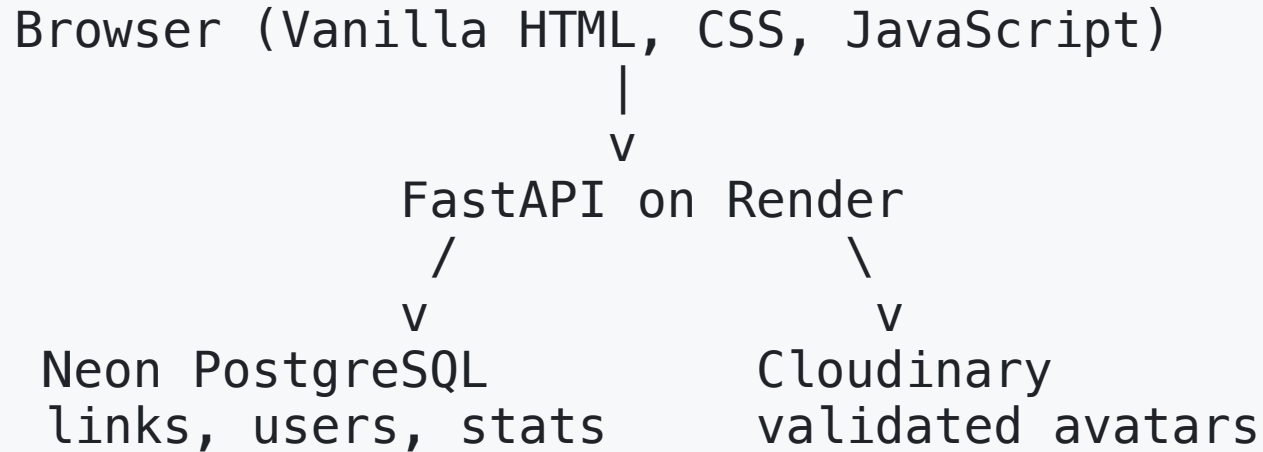

Designed for real sharing

- Public pages at `/u/{username}`
- Responsive desktop and mobile layouts
- Olive Ink and Warm Lime visual identity
- Platform icons and QR codes generated locally
- Administrator-created accounts

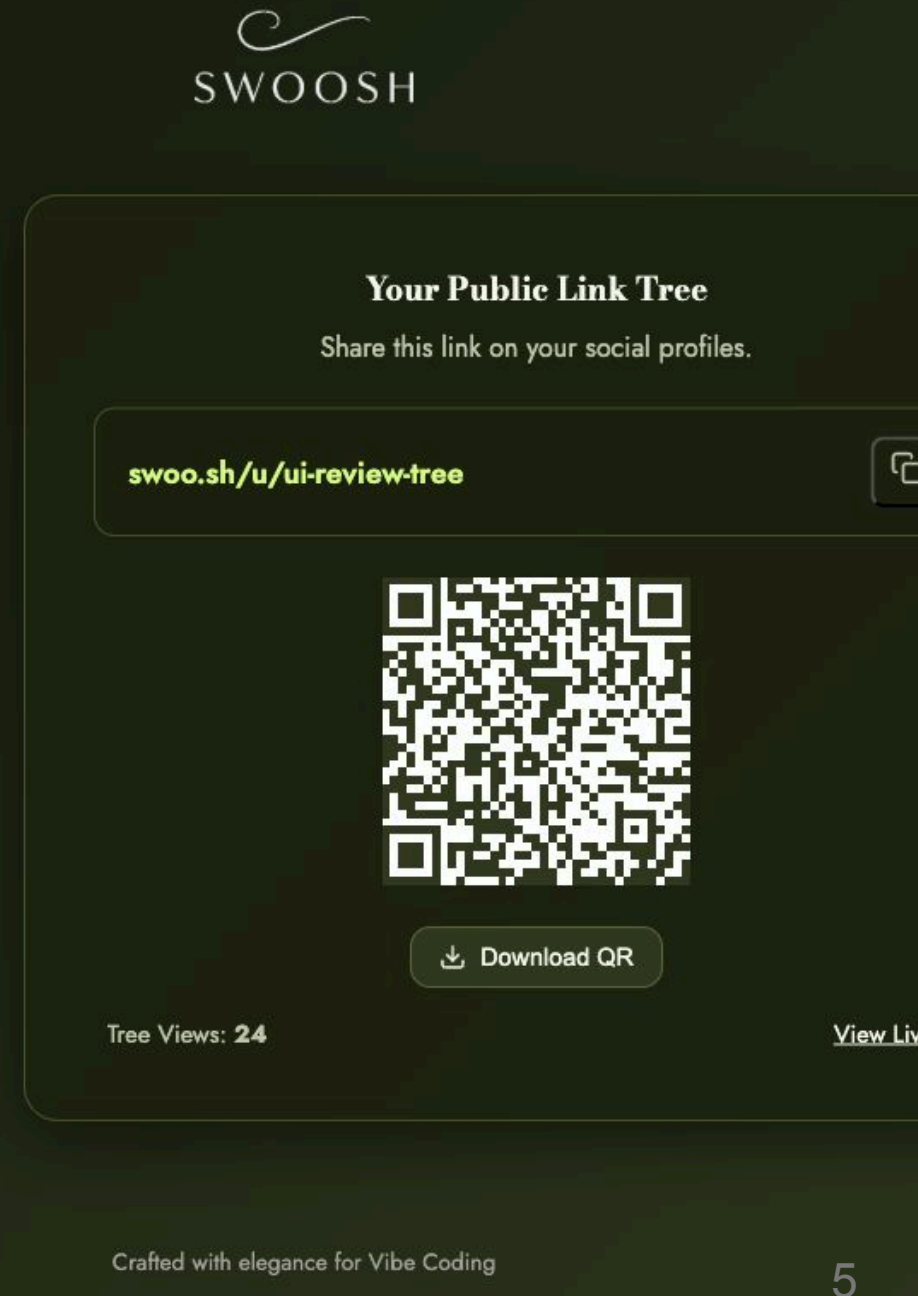

Architecture

- SQLite provides a simple local development path.
- JWT protects private operations.
- X-Active-Profile selects one of five Link Tree profiles.
- Parameterized SQL supports SQLite and PostgreSQL.

Production hardening

- Validation, rate limits, headers, and secure startup
- Atomic SQLite/PostgreSQL migrations
- Neon backup and migration rehearsal
- **73 local tests passing**
- Ruff, JavaScript, and whitespace checks

Open source and ready to learn from

The repository includes:

- Beginner-friendly and developer setup instructions
- Architecture, decisions, and implementation patterns
- API examples and deployment checklist
- Desktop and mobile product screenshots
- Contribution and security-reporting guides
- A guarded PostgreSQL migration integration test

Next steps

1. Add a project-owned custom domain.
2. Expand privacy-conscious analytics.
3. Complete an accessibility audit.
4. Add automated browser regression screenshots.

Thank you.
